DeltaQuest
Universal OEM Access
Controller

The DeltaQuest universal OEM access controller provides I/O support for PC-based access control or membership software that needs to manage access points. Up to 32 access points that use ID devices such as card readers and keypads can be supported via a single USB port or a TCP/IP network connection. All Nortech's reader technologies and many third party readers and keypads are supported.

The controller can be supplied in an attractive wall mount cabinet with an integral power supply unit and intelligent fuse panel. It can manage up to two ID devices and operate their associated barriers or turnstiles via robust output relays.

The DeltaQuest is ideal for use in the leisure industry when combined with third-party membership software.

Key Benefits

- Supports most reader technologies and output formats including Wiegand, Clock & Data, RS232 and RS485

- Each module supports two access points

- Up to 32 access points can be managed via a single USB port or TCP/IP network connection

- Fully configurable via user-friendly software

- Auto-discover software feature enables fast and accurate network configuration

- Comprehensive range of configuration and diagnostic tools avoids the need for DIP switch settings on the PCB

- Intelligent fuse board enables remote status monitoring

- Backwards compatible with the CRC400 range of universal reader interfaces

- Firmware upload from software facilitates updates without the need for site visits

Code	Product Description
DQ-S2-PH	Two reader DeltaQuest interface module in plastic enclosure with integral 3A 12V PSU and intelligent fuse board
DQ-S2-PX	Two reader DeltaQuest interface module PCB
DQ-SW-01	Configuration and diagnostic software for DeltaQuest interface modules

DQ-S2-PX
